Platform Core Capabilities

An end-to-end stack designed for the rigorous demands of modern computational oncology.

VW

3D Molecular Viewer

High-fidelity visualization of molecular poses and protein-ligand interactions.

SS

Similarity Search

Vector-based embedding search across 1.6B+ compounds in milliseconds.

CR

Candidate Ranking

Multi-parameter optimization using advanced scoring functions and GINA.

ET

Experiment Tracking

Orchestrate complex discovery pipelines with full reproducibility and logs.

QS

Quantum Scoring

Quantum-assisted reranking to identify high-affinity binding candidates.

CP

AI Research Copilot

Natural language interface for deep interrogation of research data.

SM

Simulation Monitoring

Real-time visibility into molecular dynamics and binding simulations.

XP

Explainable Predictions

Interpret model outputs with attribution maps for ADMET and activity.

BINDING POSE ANALYSIS

AFFINITY

-9.2

RMSE

1.2Å

Scientific Visualization

Deep insights through multi-dimensional visualization of molecular dynamics, docking interactions, and quantum-mechanical properties.

- Real-time pose refinement with GINA
- Dynamic ADMET property mapping
- Quantum electron density surfaces
- Embedding space trajectory analysis

<https://drugquinfosys.vercel.app/docking>

The screenshot shows the 'Docking' workspace in the Quinfosys application. The interface is divided into several sections:

- Header:** Includes the Quinfosys logo, navigation tabs (RESEARCH, DOCKING AND GNINA), a search bar, and user information (EUPH NISCL active, Research User).
- Left Sidebar:** Contains navigation links for Research Projects, Reports, Targets, Molecules, Docking (selected), GNINA, Quantum, Simulations, ADMET, Visualization, 3D Viewer, Chemical Space, Similarity, Models, Pharma LLM, Infrastructure, Compute, Storage, API, Integrations, Organization, Team, Billing, Audit Logs, and a 'GOING AWAY' notice.
- Main Content Area:**
 - Docking Workspace:** A sub-header for 'ONCOLOGY RESEARCH / MOLECULAR DOCKING' with a description: 'Configure binding pockets, execute docking simulations, and analyze ligand-protein interaction affinities.'
 - Summary Cards:** Displays key metrics: 300 Selected (Awaiting docking), 214 Completed (Successfully docked), Best Affinity: -10.8 kcal/mol (QIP-EUPH-005), 6 Active Jobs (Parallel threads), and 642 Pose Artifacts (PDBQT files).
 - Active Docking Queue:** A table showing the status of docking jobs: Vina global docking (Running), Smina minimization (Queued), Filer extraction (Completed), and Interaction fingerprinting (Waiting).
 - Affinity Results:** A table comparing ligand binding affinities for candidates QIP-EUPH-001 through QIP-EUPH-005, listing engine, affinity, RMSD, and status.
 - Top Poses Analysis:** A bar chart showing the top three poses with their respective scores and RMSD values.
 - Interaction Types:** A bar chart showing the distribution of interaction types: H-BOND (85%), HYDROPHOBIC (75%), and PI-Stacking (50%).
 - Binding Pocket:** A section for defining the binding pocket, showing the active site and box center coordinates.
 - Buttons:** Includes 'EXPORT POSES', 'POCKET SETUP', 'NEW SIMULATION', 'EXPORT SDF', 'GNINA CONFIG', and 'NEW RESCORING'.

<https://drugquinfosys.vercel.app/docking?engine=gnina>

The screenshot shows the 'GNINA CNN Rescoring' workspace in the Quinfosys application. The interface is divided into several sections:

- Header:** Similar to the docking workspace, with the Quinfosys logo, navigation tabs, search bar, and user information.
- Left Sidebar:** Similar to the docking workspace, with navigation links for Research Projects, Reports, Targets, Molecules, Docking, GNINA (selected), Quantum, Simulations, ADMET, Visualization, 3D Viewer, Chemical Space, Similarity, Models, Pharma LLM, Infrastructure, Compute, Storage, API, Integrations, Organization, Team, Billing, Audit Logs, and a 'GOING AWAY' notice.
- Main Content Area:**
 - GNINA CNN Rescoring:** A sub-header for 'ONCOLOGY RESEARCH / CNN RESCORING' with a description: 'Apply Deep Learning CNN scoring to refine docking poses and improve binding affinity predictions.'
 - Summary Cards:** Displays key metrics: 214 CNN Scored (Candidates processed), Best CNN Affinity: -11.2 kcal/mol (QIP-EUPH-001), Pose Confidence: 85% (High fidelity poses), 428 Artifacts (SDF/Log files), and 2 Failed Runs (Resource timeout).
 - CNN Rescoring Results:** A table showing the results of CNN rescoring for candidates QIP-EUPH-001 through QIP-EUPH-005, listing CNN affinity, CNN score, Vina aff., confidence, and status.
 - Pose Confidence:** A section showing the confidence score (0.842) and a description: 'Structural features highly consistent with training distribution.'
 - Artifact Browser:** A list of generated artifacts: qip_cnn_sdf_poses.sdf, gnina_rescoring.log, rescoring_prepared.sdf, and ligand_minimized.sdf.
 - Live Rescoring Logs:** A section showing the progress of the rescoring process, including steps like 'Initializing CNN model', 'Loading training model', 'Loading ligand', 'Scoring on training set', 'Scoring on test set', 'Scoring on validation set', 'Scoring on production set', 'Exporting results', and 'Rescoring complete'.
 - Buttons:** Includes 'EXPORT SDF', 'GNINA CONFIG', 'NEW RESCORING', 'EXPORT CNN SCORES', and 'VIEW LEAD CANDIDATES'.

Pharma INTELLIGENCE
Welcome to Scientific Copilot. I can switch views for molecular analysis, similarity, experiment planning, and risk review.

Pharma INTELLIGENCE
RECOMMENDED RESEARCH WORKFLOW
Based on the current project stage (**Docking & Quantum**), I recommend the following computational sequence:
MD Stability Pass: Run 250ns Molecular Dynamics on the top 3 candidates (QDF-001, 002, 003) to evaluate binding pose stability.
Free Energy Perturbation (FEP): Calculate relative binding free energies to refine pIC50 predictions within ± 1.0 kcal/mol accuracy.
ADMET Profiling: Execute the **ADMET-ToxNet v3** pipeline specifically for metabolic stability and CYP3A4 inhibition risks.
Validation Plan: Select the top candidate for *in-vitro* kinase assay validation (AEP-03a).
AI Reasoning: Transitioning from static docking to dynamic simulation will significantly reduce the false-positive rate before laboratory synthesis.

Pharma LLM
Generate next workflow

Pharma LLM
Suggest molecule modifications

Pharma INTELLIGENCE
I am analyzing your request with scientific context. Please specify an oncology target (e.g., EGR) or a specific research task (e.g., Explain ranking) for a detailed technical briefing.

Explain top candidate ranking | Summarize docking results | Identify ADMET risks | Suggest molecule modifications | Generate next workflow | Compare candidate | Summarize literature evidence | Prepare validation plan

Query lead prioritization, docking interpretations, or risk assessments...

SCIENTIFIC AI OUTPUTS SHOULD BE VALIDATED VIA COMPUTATIONAL WORKFLOWS.

MOLECULAR INTELLIGENCE ACTIONS

- Analyze Candidate
Deep structural and property analysis
- Explain Docking Pose
Detailed binding interaction breakdown
- Generate Workflow
AI-driven next steps for your research
- Summarize ADMET Risks
Safety and toxicity stage report
- Compare Molecules
Multi-property lead optimization
- Draft Candidate Dossier
Generate scientific evidence package

SAFETY / COMPLIANCE NOTICE
All outputs are research evidence only and should be validated through experimental and wet-lab workflows. Differences are provided where available for empirical verification.
